

**Policy:**

Two ABO screens drawn on two separate occasions are required prior to listing any patient with the United Network for Organ Sharing (UNOS).

**Procedure:**

The individual placing the patient on the UNOS waiting list will identify two pre-listing ABO specimens and verify them for consistency of results. That individual will place the date, time, and result of each of the ABO specimens in the appropriate space below and sign the document indicating that those results were used for ABO entry into UNet.

A second individual will verify that the correct ABO results have been entered into UNet based on the test results used by the individual listing the patient. Copies of both results will be attached to this form and maintained in the patient’s chart.

If a patient is listed urgently during non-business hours, each individual is responsible for reviewing two pre-listing ABO specimens and verifying consistency of the results. This form should be completed by both individuals within 1 business day of listing.

Both reviewers will use all available source documents in the medical record to verify that the documents contain the same ABO on the two test results.

**Patient Name:** \_\_\_\_\_

**Patient Social Security Number:** \_\_\_\_\_
